

AMENDMENTS TO THE ABSTRACT

Please amend the Abstract in the manner set forth below.

A study/development is objectively evaluated for introduction of share for investors so as to provide an investment chance to the study/development and pay dividend. A processing unit reads in study plan information, study result information, study cost balance information, and expected result information for each of the study theme ~~identification information~~ from a storage unit. According to each study theme ~~identification information~~, the processing unit calculates a total investment sum ~~[A]~~ up to now, and future study investment sum, ~~[B]~~. ~~The processing unit calculates an expected implementation income, [H] and a risk coefficient, [I]. The processing unit calculates a profit index, [R] predicting probability of industrialization of the study theme and obtaining profit and ranks the profit index. The processing unit stores study theme information including various information associated with study/development. The processing unit creates an investment set by selecting a plurality of study themes of the same or similar study groups and discloses information on introduction of share for relating to the investment set via a communication network.~~
